

-158.5 dBW

minimum GPS L1 C/A power
at the ground (IS-GPS-200)

19 dB

how far the GPS signal sits
below the noise in 2 MHz

43 dB

processing gain of the C/A
code over a 50 b/s data bit

1023

chips in each C/A code,
repeating every millisecond

20 200 km

altitude of the GPS orbit;
the signal flies about 70 ms

38 μ s/day

net relativistic gain of the
satellite clocks (≈ 11 km)

128

IS-95 processing gain:
1.2288 Mchip/s over 9.6 kb/s

1600 hops/s

Bluetooth Classic: 79
channels of 1 MHz

1 cm

RTK accuracy from a carrier
phase measured to ~ 1 mm
