

likely in 6G

upper mid-band capacity layer

network sensing, in specific uses

post-quantum crypto everywhere

learned components (CSI, beams)

satellites as part of the network

partly, or as options

delay-Doppler (OTFS/AFDM) options

clustered cell-free MIMO

RIS for fixed blind spots

semantic techniques (JSCC, AoI)

zero-energy IoT devices

not soon

terahertz mobile access

1 Tb/s to a phone

fully learned air interface

0.1 ms end to end

quantum-secured phones
